

AuralX Pro — Technical Overview

TECH STACK

React 19 + Vite 8 | Framework & build tool
Three.js + R3F + Drei | 3D model rendering (GLB)
GSAP + ScrollTrigger | Timeline & scroll animations
Framer Motion | Spring physics & transitions
Tailwind CSS v4 | Utility styling
Lenis | Smooth scrolling

ANIMATIONS & INTERACTIONS

Page Load GSAP timeline — glow blooms, rings spring-expand,
3D model scales 0.01→1 and rotates into view,
text staggers in. All chained for one fluid reveal.

3D Model GLB loaded via useGLTF, auto-centered with Box3,
normalized scale. useFrame drives circular orbit
(sin/cos), mouse tilt via lerp, subtle roll.

Mouse useMotionValue + useSpring (stiffness 50, damping 16)
maps cursor to rotateX/Y — luxury 3D tilt on hover.

Scroll ScrollTrigger pins sections, scrubs scene transitions.
Stories fade out upward, next fades in from below.

Cursor Glow Fixed radial-gradient div (400px outer + 80px core)
trails cursor via spring — purple spotlight effect.

Lenis Custom easing (1 - pow(2,-10t)) synced with
ScrollTrigger.update on every tick.

DESIGN DECISIONS

Color #050816 base — near-black with blue tint so purple/
cyan accents hit maximum contrast.

Layout Split hero (text left, 3D right) mirrors Apple pages.
Model at 50% viewport = visual anchor, not decoration.

Cards backdrop-filter blur(16px) + rgba white border =
glassmorphism that works on any dark background.

Type clamp() fluid size, letter-spacing -0.04em,
line-height 0.9 — tight editorial feel (Inter 900).

Rings Two conic-gradient rings spin opposite directions at
different speeds — energy without distraction.
